Glazing easy and simple!

See page 6 and 27.

- Swimming goggles with **silicone seals** have a higher durability than rubber seals. Overall, silicone is more flexible and tougher. Even regular contact with chlorinated water does not detract from its special properties. The material is also extremely soft and supple with remarkable impermeability.
- 2. The **head strap** is especially stretchy and individually adjustable. For quick and easy adjustment, even when the swimming goggles are being worn, the clasp should be found directly to the side of the eye cups.
- The lenses are made from **impact-resistant polycarbonate**, which has outstanding material properties, such as resistance to saltwater and breakage, to ensure long-lasting swimming enjoyment. They provide total protection against penetrating UV radiation.
- 4. Clear or blue **lenses** are best suited to swimming in medium-level light conditions such as in an indoor pool in artificial light or in open water under cloud cover. Swimming goggle lenses featuring dark tint provide the best protection in strong sunlight. They make a great choice for open water swimming in lakes or outdoor pools.
- A good pair of swimming goggles will already come with an **anti-fog coating**. To maintain this film for as long as possible, avoid touching the inside of the goggles, particularly when they are wet. Also, do not wipe the inside with a hand towel.

Individual glazing easy and simple

SWIMMING GOGGLES Fully assembled and as kits

B&S swimming goggle kits are ideally suited to recreational swimming, in the sea or at the swimming pool.

In addition to the unbeatable price-performance ratio, the fact that they are pleasant to wear and sit comfortably makes them a good, value-for-money alternative.

All swimming goggles also meet the British Standard for swimming goggles (BS 5883:1996) and feature total UV protection.

What is the proper fit for swimming goggles?

To find out whether swimming goggles fit correctly, they must be tried on before use.

The most important areas to be aware of are the **eye sockets** and around the nose.

It is easy to test for the **ideal fit** by holding the swimming goggles gently to the eyes, without attaching the head strap.

When goggles **fit perfectly, you feel gentle suction** and pleasant, uniform pressure around the eye.

For a customised fit in the nose area, swimming goggles should have adjustable or interchangeable nose bridges.

COMBINATION SWIMMING GOGGLES DELUXE

With plano lenses - pre-assembled

- Shock resistant polycarbonate
- Anti-fog coating do not clean with a microfibre cloth
- Lenses 50% tinted
- Adjustable head band

DIVING MASKS What to look out for when choosing a suitable diving mask:

- A one-piece design featuring side panels offers a broad 180° panoramic view that makes diving a special experience.
- Tempered lenses are break- and scratch-resistant, and offer maximum protection with long-lasting performance.
- A seal edge made of transparent silicone offers increased visual perception of the surroundings, making it easier to explore the world beneath the water. Conversely, black silicone seals the wearer off from distracting reflections in the water and is best suited to camera crew divers and underwater photographers.
- The colour yellow provides better visibility if the mask gets lost in the water.
- Diving masks for professional divers should withstand dive depths of around 100 meters. For diving on vacation or at the pool, dive depths of up to 30 meters are sufficient.
- 6.) The mask strap should not feel constricting but should nevertheless be a snug fit. Ideally, the part that sits at the back of the head should comprise two straps to prevent it from slipping off. A neoprene cover can prevent the mask strap from becoming twisted and makes it easy to put the mask on and take it off, which is particularly useful for long hair.

PROFESSIONAL DIVING MASKS FROM LEADER

Small internal volume for better wearing comfor

- Lenses are made of hardened glass to reduce the risk of breakage
- Impact resistant polycarbonate frame
- The diving mask body is made of hypoallergenic silicone

DIVING MASK Is the diving mask sealed?

Fogging up of the lenses and the entry of water can be avoided only when the diving mask is completely sealed. Here are a few tips on how to ensure that this is the case:

- 1. Before the dive, check that the seal edge is not folded over and that the silicone lies flat against the skin.
- 2. The mask strap should be properly adjusted. This does not necessarily mean making the mask strap tighter if the mask is not sealed. A mask strap that is too tight can also cause a loose fit of the mask due to the seal being too compressed. It is important to take into account that the mask will have an even tighter fit under water due to the water pressure.
- 3. There should be no hair between the face and the mask. This aspect must be taken into account in particular if the wearer has long hair or a beard. Even one thin strand of hair can result in the mask not sealing properly.

KIDS DIVING MASK M-111

Perfect for Kids

- Impact resistant polycarbonate frame
- Total-PD: approx. 60 mm
- Diving depth max. 100 m

Includes plastic box
